

Issues installing Tylist on MacOS Mojave / Catalina

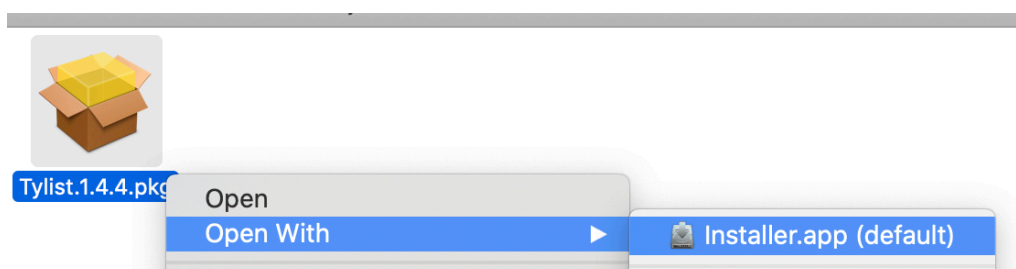

Due to changed MacOS security policies, when installing the Tylist application, you may get a warning: "Tylist 1.4.4 can't be opened because Apple cannot check it for malicious software" (see image below).

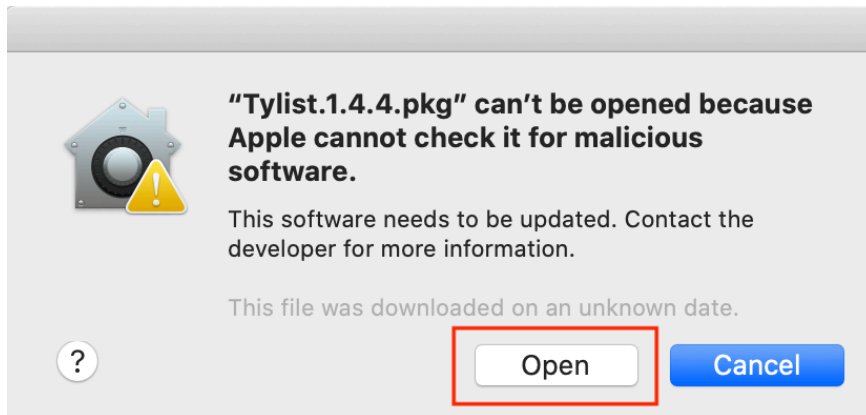

Apple instituted this policy to help protect users against installing malicious software from unknown developers. This warning is not due to any security flaw in the Tylist software.

If you encounter this issue, follow the following steps to install Tylist.

- In Finder, select and control-click the 'Tylist.1.4.4.pkg' file.
- In the menu that appears, select Open with > Installer.app (default).

- A new dialog window will appear. Click the 'Open' button and proceed with the normal MacOS installation process.
